TORNADO PREPAREDNESS AND SAFETY

Tornados are nature’s most violent storms. Spawned from powerful thunderstorms, tornados can cause fatalities and devastate a neighborhood in seconds. To begin preparing, you should build an emergency kit and make a family communications plan. Be alert to changing weather conditions and listen to NOAA Weather Radio or to commercial radio or television newscasts for the latest information. Look for the following danger signs:

- Dark, often greenish sky
- Large hail
- A large, dark, low-lying cloud (particularly if rotating)
- Loud roar, similar to a freight train

If a tornado “watch” is issued for your area, it means that a tornado is “possible.” Listed below are safety tips if a TORNADO WATCH is issued:

- Gather items like water, weather radio with extra batteries, snacks, blankets, and flashlights.
- Keep a radio (i.e. WJOL AM 1340) or local area TV station on so you will have access to the most up-to-date storm information. www.willcountyema.org/noaa.php
- Limit travel during a tornado watch. One of the most dangerous places you can be during a tornado is in your car.
- Keep alert and watch for changing weather conditions
- Be ready to seek shelter at a moments notice

Watches give you time to plan and prepare by placing small objects inside (such as garbage cans, bicycles, and patio/deck furniture). Keep children under close supervision.

If a tornado “warning” is issued, it means that a tornado has actually been spotted or is strongly indicated on radar, and it is time to go to a safe shelter immediately. Listed below are safety tips if a TORNADO WARNING is issued:

If You're in a Building:

- Make sure you have a portable radio, preferably NOAA Weather Radio, for weather alerts and updates.
- Seek shelter in the lowest level of your home, such as a basement or storm cellar. If you don’t have a basement, go to an inner hallway, a smaller inner room, or a closet.
- Keep away from all windows and glass doorways.
- If you’re in a building such as a church, hospital, school or office building, go to the innermost part of the building on the lowest floor. Do not use elevators because the power may fail, leaving you trapped.
- You can cushion yourself with a mattress, but don’t cover yourself with one. Cover your head and eyes with a blanket or jacket to protect against flying debris and broken glass. Don’t waste time moving mattresses around.
- Keep pets on a leash or in a crate or carrier.
- Stay inside until you’re certain the storm has passed, as multiple tornadoes can emerge from the same storm.
- Do not leave a building to attempt to “escape” a tornado.
If You're Outside:
- Try to get inside a building as quickly as possible and find a small, protected space away from windows.
- Avoid buildings with long-span roof areas such as a school gymnasium, arena or shopping mall, as these structures are usually supported only by outside walls. When hit by a tornado, buildings like these can collapse, because they cannot withstand the pressure of the storm.
- If you cannot find a place to go inside, crouch for protection next to a strong structure or lie flat in a ditch or other low-lying area. Cover your head and neck with your arms or a jacket, if you have one.

If You're in a Car:
- If you can safely drive away from the tornado, do so.
- If there is a sturdy structure available, go inside.
- If no building is available, it might be better to pull over, stop the car (but leave it running so the air bags work), and crouch down below the windows. The airbags and frame of the car will offer some amount of protection, but certainly not absolute safety.
- A long-standing safety rule has been to get out of the car and into a ditch. If you do that, you should get far enough away from the car that it doesn't tumble onto you. Being below the prevailing ground level may shield you from some of the tornado wind and flying debris, but there is still danger from those.
- **DO NOT** get out of a vehicle and climb up under the embankment of a bridge or overpass. This often increases your risk.

If You're in a Mobile Home:
- Do not remain in a mobile home during a tornado. Even mobile homes equipped with tie-down systems cannot withstand the force of a tornado's winds.
- Heed all local watches and warnings and leave your mobile home to seek shelter as quickly as possible before a tornado strikes, preferably in a nearby building with a basement.
- If no shelter is immediately available, find the lowest-lying area near you and lie down in it, covering your head with your hands.

James D. Hock
City Manager

The City of Joliet is the fourth largest city in the state of Illinois, located just 45 miles southwest of Chicago’s Loop. Home to over 147,000 residents, in addition to thriving businesses and attractions, the City of Joliet is easily accessible by rail, auto and bus transit. A perfect place to live, work and play, Joliet is constantly striving to promote growth and diversity. For more information on Joliet visit [www.cityofjoliet.info](http://www.cityofjoliet.info) or call 815-724-4000.
